

ORS Project Based Teacher Rubric

This rubric is modified from the Buck Institute for Education Project Based Teacher Rubric. The purpose of this rubric is for teachers to self-assess along their journey towards becoming highly skilled Project Based Instructors.

	Level 1 PBL Teacher	Level 2 PBL Teacher	Level 3 PBL Teacher	Level 4 PBL Teacher
Design and Plan	<ul style="list-style-type: none"> Project is missing several PBL requirements and is more traditional project. PBL plan and project calendar have very little detail. Many resources not anticipated or arranged for prior to project beginning. 	<ul style="list-style-type: none"> Project includes most of the PBL requirements. PBL plan and project calendar lack sufficient detail. Some resources not anticipated or arranged for prior to project beginning. 	<ul style="list-style-type: none"> Project includes all of the PBL requirements. PBL plan and project calendar lack some detail. Most resources anticipated or arranged for prior to project beginning. 	<ul style="list-style-type: none"> Project includes all of the PBL requirements. PBL plan and project calendar are detailed, but allow for flexibility. All resources anticipated and arranged prior to project beginning.
Align to Standards	<ul style="list-style-type: none"> Final product and assignments throughout project are difficult to assess learning towards standards and 21st century skills or are not aligned to standards. 	<ul style="list-style-type: none"> Final product and assignments throughout project provide evidence that some of the standards and 21st century skills have been learned. 	<ul style="list-style-type: none"> Final product and assignments throughout project provide evidence that most of standards and 21st century skills have been learned. 	<ul style="list-style-type: none"> Final product and assignments throughout project provide evidence that all of the standards and 21st century skills have been mastered.
Build the Culture	<ul style="list-style-type: none"> No norms for group work, collaboration, and giving/receiving feedback have been established. Students are given minimal opportunities for voice & choice. Students heavily rely on teacher direction and intervention. Students believe there is only one right answer and have a fixed mindset. They “just want to get it done”. 	<ul style="list-style-type: none"> There are some norms established for group work, collaboration, and giving/receiving feedback, but are viewed as teacher rules. Students are given a few opportunities for voice & choice. Students are starting to work independently, but still rely on significant teacher direction. Students recognize that there could be more than one right answer, but are afraid to be wrong. Look to see what other groups are doing. 	<ul style="list-style-type: none"> Norms for group work, collaboration, and giving /receiving feedback have been established and co-created with students. Students have several opportunities for voice & choice. Students are working independently to some extent, but require frequent teacher direction. Students understand there is more than one-way to complete project, but require teacher affirmation to try new ideas. 	<ul style="list-style-type: none"> Norms for group work, collaboration, and giving/ receiving feedback are co-created and self-regulated by students. Students are using voice & choice regularly throughout the project. Students are working independently with minimal teacher direction. Students understand that there is no “right way” to complete the project and believe that F.A.I.L. is just first attempt in learning.
Manage Activities	<ul style="list-style-type: none"> The classroom is mostly dominated by whole group instruction. Project has very few progress checks and deadlines. No classroom routines for project were discussed. Poor productivity daily. 	<ul style="list-style-type: none"> The classroom has some individual and team work time and small group instruction, but too much time is whole group. Project has a few progress checks and deadlines, but some are unrealistic. Classroom routines discussed at the beginning of the project, but no follow-through. Many days have low productivity. 	<ul style="list-style-type: none"> The classroom has individual and team work time and small and whole group instruction that is not evenly distributed throughout project. Project has several realistic progress checks and deadlines, but needs more flexibility. Classroom routines are established, but not consistently followed. Productivity varies daily. 	<ul style="list-style-type: none"> The classroom has a balance of individual and team work time and small and whole group instruction throughout project. Project has several realistic progress checks and deadlines, but allows for flexibility Classroom routines are established and consistently followed. Daily productivity maximized. Students provided project management tools.

	Level 1 PBL Teacher	Level 2 PBL Teacher	Level 3 PBL Teacher	Level 4 PBL Teacher
Scaffold Student Learning	<ul style="list-style-type: none"> • Teacher provides all content knowledge before project begins. • Students are asked to do research or collect data, but without guidance. No true inquiry is occurring. • 21st century skills are not addressed by the project. 	<ul style="list-style-type: none"> • Teacher provides most content knowledge before project begins. Minor scaffolding in response to student questions. • Students are asked to do research and collect data with minor guidance. Superficial inquiry is occurring. • 21st century skills are a side effect of the project, but not taught intentionally. 	<ul style="list-style-type: none"> • Some scaffolding occurs in response to student questions and “need to knows,” but some content is still presented prior to project beginning. • Student inquiry is facilitated and scaffolded, but needs either more support or more independence. • 21st century skills are taught, but students need more opportunities to practice before applying them. 	<ul style="list-style-type: none"> • Scaffolding regularly occurs in response to student questions and “need to knows.” Teacher waits until students need the content. • Student inquiry is facilitated and scaffolded while allowing for students to work independently. • 21st century skills are taught and students are provided with opportunities to practice, apply, and reflect on skill progress.
Assess Student Learning	<ul style="list-style-type: none"> • Project does not assess student understanding of standards. Focuses on looking up information. • 21st century skills not assessed. • Formative assessment is not used during the project. • There are no opportunities for peer critique and revision. • A breakdown of points is provided for the final product, but not a true rubric. 	<ul style="list-style-type: none"> • Student understanding of standards is assessed by test and team-created product. • 21st century skills not formally assessed. • Formative assessment is used infrequently during the project. • Peer critique and revision opportunities are informal and may be superficial. • Rubrics are used by teacher to assess final product. 	<ul style="list-style-type: none"> • Student understanding of standards and 21st century skills assessed through project products and other sources, but individual mastery not well-known. • Formative assessment is used several times during project. • Peer critique and revision opportunities occur, students still learning how to give feedback. • Rubrics used by teacher for formative and summative assessments. 	<ul style="list-style-type: none"> • Student understanding of standards and 21st century skills assessed through project products and other sources, and individual mastery is assessed. • A variety of formative assessment tools are used frequently. • Peer critique and revision opportunities occur regularly and provide effective feedback. • Rubrics used by teacher and students to assess formative and summative assessments.
Engage and Coach	<ul style="list-style-type: none"> • Teacher does not take students’ interests, backgrounds, and strengths into consideration when designing the project. • The driving question does not allow students to generate their own questions to guide inquiry. • Expectations for performance are not clear. • Students are rarely engaged or motivated to do more than bare minimum. Teacher constantly struggles with keeping students on task. 	<ul style="list-style-type: none"> • Teacher considers students’ interests, backgrounds, and strengths, but only minimally affects project design. • Students generate their own questions, but the structure of the project prevents students from investigating them. Teacher steers the inquiry. • Expectations for performance are too low or too high. • Students are somewhat engaged and feel motivation during certain parts of the project, but teacher still has to work to keep students on task. 	<ul style="list-style-type: none"> • Teacher considers students’ interests, backgrounds, and strengths to help shape the project design. • Student questions guide inquiry to some extent, but are answered too quickly by teacher. Students rarely reflect on driving question. • Appropriately high expectations are set for all students’ performance and are communicated. • Students are engaged and motivated to work hard throughout project due to teacher’s enthusiasm and relationships with students. 	<ul style="list-style-type: none"> • Teacher considers students’ interests, backgrounds, and strengths to strongly shape the project throughout and keep students engaged. • Student questions are essential to inquiry and product development. Students regularly reflect on driving question. • Appropriately high expectations are set for all students’ performance and are reinforced by teacher and student. • Students are highly engaged and motivated throughout project due to their enthusiasm and sense of ownership of the project.
